                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2 PF4AR members were identified by probing lambda libraries from human monoclyte-like cell line HL-60 and human peripheral blood lymphocytes using a large fragment of IL-8 receptor DNA (full sequence given in AAQ80520). The nucleotide sequences of the 2 PF4ARs are given in AAQ80521 and AAQ80522, and their respective amino acid sequences in AAR68812 and AAR68813.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treatment of inflammatory disorders - by administering an antibody capable of binding a platelet factor 4 superfamily receptor polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               platelet factor superfamily receptor; lymphocyte; chemotactic; inflammation; inflammatory disease; arthritis; emphysema; cystic; fibrosis; colitis; bronchitis; meningitis; therapeutic; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90677 and AAY90683-Y90687), and to DNA encoding them (AAA30709-A30743 and AAA30775-A30779). The mutant proteins of the invention contain a

CC (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, CC is substituted for an endogenous residue in IC3 at a position 16 amino CC acids N-terminal of an endogenous proline in TM6 to form a sequence CC X-(AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg CC or Ala, and is preferably Lys. When the endogenous residue at this CC position is Lys, this residue is replaced by His, Arg or preferably Ala. CC The 15 amino acid stretch between the substituted amino acid and the Pro CC may be endogenous, non-endogenous, or a mixture of endogenous and CC identifying antagonists, agonists and partial agonists for use as CC pharmaceutical agents. The mutant proteins are also useful in research CC settings for elucidating the roles of the receptors in normal and CC diseased conditions. Antagonists for a particular GPCR are useful for CC treating diseases and disorders associated with that receptor. Because CC directly for screening of compounds without the need for endogenous CC ligands. The present sequence represents cDNA encoding a human wild-type GPCR used in an exemplification of the invention. This was cloned and CC subjected to site-directed mutagenesis (SDM) to generate DNA encoding CC the corresponding mutant of the invention. This was cloned and CC subjected to site-directed mutagenesis (SDM) to generate DNA encoding CC the corresponding mutant of the invention. This was cloned and CC subjected to site-directed mutagenesis (SDM) to generate DNA encoding CC the corresponding mutant of the invention. This was cloned and CC subjected mutagenesis (SDM) to generate DNA encoding CC the corresponding mutant of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ωy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
CC AAY90677 and AAY90687), and to DNA encoding them (AAA30709-A30743 CC and AAA90769-A90789). The mutant protein of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 CC (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, x, CC is substituted for an endogenous residue in IC3 at a position 16 amino CC acids N-terminal of an endogenous proline in TM6 to form a sequence CC x-(AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg CC or Ala, and is preferably Lys. When the endogenous residue at this CC position is Lys, this residue is replaced by His, Arg or The 15 amino acid stretch between the substituted amino acid and the Pro CC may be endogenous, non-endogenous, or amixture of endogenous and CC non-endogenous residues. The constitutively active GPCRs are useful for identifying antagonists, agonists and partial agonists for use as CC pharmaceutical agents. The mutant proteins are also useful in research CC settings for elucidating the roles of the receptors in normal and CC diseased conditions. Antagonists for a particular GPCR are useful for treating diseases and disorders associated with that receptor. Because
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                       The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. Sequences AAA30709- AAA30743 and AAA30775-A30779 represent encoding the mutant human GPCRs of the invention.

                                                                                                                                                                                                                                          This is the nucleotide sequence of human cDNA coding for a Burkitt's lymphoma receptor 1 (BLR1, see AAY06644). The invention relates to methods for modulating the interaction of BLR1 with its ligand, B lymphocyte chemoattractant (BLC, see AAY06642). The methods comprise combining BLR1 and BLC polypeptides with a candidate modulator agent under conditions whereby, but for the presence of the agent, the polypeptides engage in a first interation, and determining a second interaction of the polypeptides in the presence of the agent, wherein a difference between the first and second interactions indicates that the agent modulates the interaction of the polypeptides. The modulator is preferably an antagonist, especially dominant negative, form of BLC and BLC agonists and antagonists may be useful for treating viral (e.g. HIV) infections, lymphoma, B lineage leukaemia, and autoimmune diseases such as rheumatoid arthritis, the contraction of the polypeptides.
                                                                                                                                                                  Matches

                                                                                                                                                                                            Sequences ABB10981-ABB12330 represent nucleic acids encoding them. The CR sequences ABA0825-ABA09574 represent nucleic acids encoding them. The CR invention also relates to vectors and recombinant host cells comprising a connected of the invention, methods of producing the novel polypeptides, can tibodies against the polypeptides, methods of identifying compounds which the polypeptides of the invention. Although novel, many of the polypeptides in a sample, and methods of identifying compounds which the polypeptides of the invention. Although novel, many of the polypeptides in a sample, and methods of identifying compounds which the polypeptides of the invention may the novel proteins, thereby considered activities, and hence the polypeptides of the invention may the polypeptides of the invention activities, including cytokine, cell proliferation or cell of the protein of the polypeptides of the invention of their biological activities; or may be conditions or chemokactic or chemokactic or chemokactic activities; receptor or ligand activities; or may be conditions, e.g., by protein or gene therapy. Such conditions include and invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell cancers, haematopoletic activities may be used to promote wound healing (e.g., of burns, inclusions and ulcers), while those with the conditions in addition to immune disorders (e.g., myeloid or corrosity, and abnormal conditions with growth factor activity may be used in cell cultures to manipulate stem cells in culture to give rise to neuroepithelial cells cancers in the diagnosis of the above conditions, and in drug conditions. The present sequence represents a cDNA encod

This probe was designed based on the sequence derived from the second transmembrane domain of G-protein-coupled receptors. After tertiary screening, six plaques were isolated. The insert of one of these plaques, termed F3R was of 2.5 kb in size. This insert was sequenced. The protein deduced from the F3R clone demonstrates that it belongs to the family of G-protein-coupled receptors. The deduced protein sequence

/note-*Organ: pooled brain, lung, testis; Vector: pCMV-SPORT6; Site_1: NotI; Site_2: ECORV (destroyed); RNA source anonymous pool of 6 male brains, age age 23-27; 1 male lung, age 27; and 1 male testis, age 69. Library is oligo-dT primed and directionally cloned (ECORV site is destroyed upon cloning). Average insert size 18 kb, insert size range 1-3 kb. Library is normalized and enriched for full-length clones and was constructed by C.
